

*2*  
**Application No.: 08/685,338**

**Filing date: June 23, 1996**

**Page 2**

**15. (Amended)** A balloon as in claim 11 having an operating pressure to which the balloon may be safely inflated without bursting of at least 10 atmospheres, a diameter at 3 atmospheres of from about 6 to about 12 mm, [a generally linear diameter growth rate over the range of 3-10 atmospheres,] and a diameter growth of at least 2 mm over the range of 3-10 atm.

**16. (Amended)** A balloon as in claim 11 having an operating pressure to which the balloon may be safely inflated without bursting of at least 9 atmospheres, a diameter at 3 atmospheres of from about 12 to about 30 mm, [a generally linear diameter growth rate over the range of 3-9 atmospheres,] and a diameter growth of at least 3 mm over the range of 3-9 atm.

**35. (Amended)** A balloon for a medical device characterized by an operating pressure to which the balloon may be safely inflated without bursting of at least [12] 20 atmospheres, a diameter at 3 atmospheres of from about 1.5 to about 3.0 mm, [a generally linear diameter growth rate over the range of 3-12 atmospheres,] and a diameter growth of at least 0.5 mm over the range of 3-12 atm.

**36. (Amended)** A balloon for a medical device characterized by an operating pressure to which the balloon may be safely inflated without bursting of at least [12] 20 atmospheres, a diameter at 3 atmospheres of from about 3.0 to about 6.0 mm, [a generally linear diameter growth rate over the range of 3-12 atmospheres,] and a diameter growth of at least 1.0 mm over the range of 3-12 atm.

**37. (Amended)** A balloon for a medical device characterized by an operating pressure to which the balloon may be safely inflated without bursting of at least 10 atmospheres, a diameter at 3 atmospheres of from about 6 to about 12 mm, [a generally linear diameter growth rate over the range of 3-10 atmospheres,] and a diameter growth of at least 2 mm over the range of 3-10 atm.
